

Recommended department uses of data entry logons for CrimeSoft Advanced

CrimeSoft Advanced comes with fifty standard data entry (de1-de50), five supervisor logons (supv1-supv5) and one master (master). It is recommended that every employee on your staff that has access to CrimeSoft Advanced have their own standard data entry logon, or account, (de1,...ect.).

Standard data entry accounts allow for the creation records. However only those records created by that specific account can be edited or deleted.

The supervisor accounts can edit or delete any records regardless of the account that created them. Therefore the use of the supervisor logons should only be used only for editing and deletion of records created by other accounts.

The 'master' logon should only be used during software maintenance, downloading upgrades, or resetting data entry accounts.

After using a supervisor or the master logon to do editing or maintenance it is recommended that you re-logon* with a standard data entry account (de1,...ect). This will keep all records from being disrupted or deleted by accident.

*Re-logon is accomplished by selecting the 'Scripts' pull down menu and then selecting the 'Re-logon' script. A log on window will appear.
